

Figure 1 is a scatter plot showing the relationship between the number of items (X-axis) and the number of correct answers (Y-axis). The X-axis ranges from 1 to 4, and the Y-axis ranges from 0 to 200. Two data series are plotted: a red line with red dots and a black line with black dots. Both series show a decreasing trend as the number of items increases. The red series starts at approximately 180 for 1 item and decreases to about 50 for 4 items. The black series starts at approximately 120 for 1 item and decreases to about 10 for 4 items.
